ATVs have been around since the 1950's but didn't become available to the public at large until the 70's! The ATV vehicles available today are quite a bit different than the early models. The influx of ATV riders and safety concerns have also brought about new laws to go along with them. If your thinking about getting your first ATV, you're going to want to learn a few things about them before taking the plunge. You'll also need to decide if you want a Sport or Utility type of ATV. Do you know what differences are between the two? Non-destructive testing (NDT) systems can generate incomplete, incorrect or conflicting information about a flaw or a defect. Therefore, the use of more than one NDT system is usually required for accurate defect detection and/or quantification. In addition to a reduction in inspection time, important cost savings could be achieved if a data fusion process is developed to combine signals from multisensor systems for manual and remotely operated inspections. This gathering of data from multiple sources and an efficient processing of information help in decision making, reduce signal uncertainty and increase the overall performance of a non-destructive examination. This book gathers, for the first time, essays from leading NDT experts involved in data fusion. It explores the concept of data fusion by providing a comprehensive review and analysis of the applications of NDT data fusion. This publication concentrates on NDT data fusion for industrial applications and highlights progress and applications in the field of data fusion in areas ranging from materials testing in the aerospace industry to medical applications. Each chapter contains a specific case study with a theoretical part but also presents experimental results from a practical point of view. The book should be considered more as a pragmatic introduction to the applications of NDT data fusion rather than a rigorous basis for theoretical studies. The ATVs (all terrain vehicles) we know today had very humble beginnings in the mountainous farming regions of Japan. The muddy mountain roads became difficult for the farmers to travel during spring thaws and were almost impossible to drive over with conventional vehicles or big machinery. The Japanese, always a culture to modify and tinker with something until they could improve it, created the three wheeled ATV. This vehicle did wonders for helping the local farmers. The ATVs were less expensive than the larger farm vehicles and it proved to be an excellent little workhorse. With the economic crisis that began in 2008, a long-standing trend toward increased regulation is becoming a flood. The clamor for improved enterprise risk management and the complexity of multinational compliance present executives with a dramatically new array of challenges. Governance should offer solutions, but it is clear that yesterday's governance practices aren't up to the task. In both design and implementation, they are too disconnected and incomplete to fully address our complex compliance and risk management puzzle. Executives get only fragmented views of their true business performance, and inefficiencies drive up costs. The consequences of inadequate governance were demonstrated in the economic meltdown of 2008. As the world struggles to recover from that crisis, business is now faced with a confusing array of evolving regulations, the challenge of managing compliance across multinational organizations and a new imperative for risk management that is coordinated across the enterprise. It's clear that yesterday's governance practices don't meet today's need for centralized controls, integrated compliance and risk management and greater transparency. The need for organizations to change—and change now—is clear.

Under Control captures decades of business governance experience from many of the leading authorities at CA, Inc. This book sets out not only to explain the essential challenges of effective business governance, but to help you build solutions for your organization based on lessons learned at CA from its customers and in its own corporate structure. From governing the organization's policies as a whole instead of in silos, to a department-by-department look at the role and impact of governance, to governing your green initiatives, to the role of the board of directors, to the importance of risk management, this book lays out some of the strategies and processes that may help your organization manage its risk and regulatory requirements. It is clear that the governance standards in the past were inadequate, and that risks have not been properly assessed or understood. This book is a first step in solving this problem so that your organization is prepared and able to respond and thrive in today's rapidly evolving environment. Under Control is the first book published in the new CAPress imprint, a joint publishing program between Apress and CA Inc. "One of the defining factors of the first decade of the 21st century has been the increase of regulation and governance. To explain these trends, and the various best practices for ensuring governance, enterprise IT management solutions provider CA Inc. enlisted more than a dozen subject matter experts from its ranks to contribute content. The resulting book explores the need for broad governance, different areas where governance is important, and various ways for organizations to manage and implement compliance, including IT governance, project portfolio management, information governance and sustainability management. The book, while largely vendor-neutral, draws on CA's experience creating governance solutions as well as managing its own governance issues." —Aaron Smith,

The radiation therapist's primary concern is the treatment of patients with malignant dis ease. However, there are definite indications for radiation treatment for benign diseases that do not respond to conventional methods of treatment. It may be the treatment of choice in the unusual instance of a life-threatening benign disease that cannot be surgi cally or medically managed. The present volume by Order and Donaldson represents a major statement on the uti lization of radiation techniques in the management of benign disease. The initial report of the Committee on Radiation Treatment of Benign Disease from the Bureau of Radiological Health recommended that consideration be given to the quality of radiation, the total dose, overall time, underlying organs at risk and shielding factors before the institution of radiation therapy. Infants and children should be treated with ionizing radiation only in very exceptional cases and after careful evaluation of the potential risk compared with the expected benefit. Direct irradiation of the skin areas overlying organs that are particularly prone to late effects such as the thyroid, eye, go nads, bone marrow, and breast should be avoided. Meticulous radiation protection tech niques should be used in all instances and the depth of penetration of the x-ray beam should be chosen in accordance with depth of the pathologic process'.
