Greenfield's Neuropathology, the worlds leading neuropathology reference, provides an authoritative, comprehensive account of the pathological findings in neurological disease, their biological basis and their clinical manifestations. This account is underpinned throughout by a clear description of the molecular and cellular processes and reactions that are relevant to the development, and normal and abnormal functioning of, the nervous system. While this scientific content is of paramount importance, however, care has been taken to ensure that the information is presented in a way that is accessible to readers working within a range of disciplines in the clinical neurosciences, and that also places the neuropathological findings within the context of a broader diagnostic process. The new eighth edition incorporates much new information, new illustrations and many new authors, while retaining the depth, breadth and quality of content so praised in previous editions. Each chapter opens with an introductory section designed to offer an integrated approach to diagnosis, taking account of clinical manifestations, neuroradiological and laboratory findings as well as the neuropathological and molecular genetic features of the diseases being considered. Strong emphasis has been placed on facilitating the retrieval of neuropathological information by non-neuropathologists grappling with differential diagnoses or seeking information on broad categories of neurological disease, and boxes and tables are used to present important symptoms and signs, patterns of disease and other features for ease of reference. High quality line and photographic illustrations, the majority in full colour, are all available on a companion CD, to complete the offering. The present volume A4 of the "Uranium" series of the Gmelin Handbook deals with two very important technological aspects of the nuclear fuel cycle: - the behavior of fuel elements during burnup in a nuclear reactor, and - the reprocessing of spent fuel to recover the non-fissioned uranium and newly created materials. The usefullifetime of a fuel element in a nuclear reactor depends strongly on the change of its chemical and physical properties during irradiation. Properties like thermal conductivity, swelling, creep, and oxygen-to-metal ratio are strongly affected by the intense neutron field and the energetic fission products. Furthermore, the high temperature gradient in a fuel element also produces alterations of the initial fuel. such as densification or U: Pu segregation. All of these effects are thoroughly discussed for the different kinds of fuels to be used in modern nuclear reactors today or in the future. The vast amount of very often Contradictory results in sometimes difficultly obtainable literature has been summarized to create a compendium in this field with the two sections, on oxide and on carbide and nitride fuels, respectively. The chapters on reprocessing of spent fuels deal only with fuel elements of the uranium 235 thorium fuel cycle and with those containing fuel highly enriched in U. The treatment of UO<sub>2</sub> and (U,Pu)<sub>2</sub>O<sub>7</sub> has already been given in the transuranic element series. This is the first book of its kind to bring together leading contributors in the field. With Professor Dame Julia Polak, a prominent academic, as the editor, the book provides a comprehensive overview of lung repair guiding readers from the basic science to clinical applications. The contributions are written by authors who are leading authorities on the topic, from the US, Japan, Australia and the UK. This book studies the psychology surrounding the development of owning and sharing in humans across different cultures. On a moonlit night in 1903, a mysterious young woman flees alone across the Canadian wilderness, one quick step ahead of her pursuers. Mary Boulton is nineteen years old, half mad, and widowed - by her own hand. Tearing through the forest with dogs howling in the distance, she is desperate, her nerves burning, and she is certain of one thing only - that her every move is being traced. Two red-headed brothers, rifles across their backs, lurch close behind her: monstrous figures, identical in every way, with the predatory look of hyenas. She has murdered their brother, and their cold lust for vengeance is unswerving. As the widow scrambles to stay ahead of them, the burden of her existence disintegrates into a battle in which the dangers of her own mind become more menacing than the dangers of the night. Along the way, the steely outlaw encounters a changing cast of misfits and eccentrics. Some, like the recluse known as 'The Ridgerunner', provide a brief respite from her solitude; others, like the Reverend Bonnycastle, offer support only to reveal that they too have their own demons raging inside. As she is plunged further away from civilisation, her path from retribution to redemption slowly unfurls. A startling transformation of the classic western narrative, The Outlander is the haunting tale of one young woman's deliberate journey deep into the wild. "My name is Rylee and I am a Tracker." When children go missing, and the Humans have no leads, I'm the one they call. I am their last hope in bringing home the lost ones. I salvage what they cannot. The clock is ticking, and I can feel the weight of the final battle with the demon hordes looming over my head. The puzzle pieces are becoming clearer, but the casualty list is growing. And with each name that is added to those we've lost, my confidence cracks a little more. Yet there is hope. A child saved. A life lost. A prophecy fulfilled. Starring the irresistible, ass-kicking heroine Rylee Adamson, Wounded is the eighth book in USA Today bestselling author Shannon Mayer's sexy, exciting, and laugh-out-loud series, a dangerously addictive paranormal romance. THE INTERNATIONAL BESTSELLER: OVER HALF A MILLION COPIES SOLD In The Challenger Sale, Matthew Dixon and Brent Adamson share the secret to sales success: don't just build relationships with customers. Challenge them What's the secret to sales success? If you're like most business leaders, you'd say it's fundamentally about relationships - and you'd be wrong. The best salespeople don't just build relationships with customers. They challenge them. Matthew Dixon, Brent Adamson, and their colleagues at CEB have studied the performance of thousands of sales reps worldwide. And what they discovered may be the biggest shock to conventional sales wisdom in decades. The Challenger Sale argues that classic relationship-building is the wrong approach. Every sales rep in the world falls into one of five distinct profiles, and while all of these types of reps can deliver average performance, only one - the Challenger - delivers consistently high performance. Instead of bludgeoning customers with facts and features, Challengers approach customers with insights about how they can save or make money. They tailor their message to the customer's specific needs. They are assertive, pushing back when necessary and taking control of the sale. Any sales rep, once equipped with the right tools, can drive higher levels of customer loyalty and, ultimately, greater growth. Matthew Dixon and Brent Adamson are managing directors with CEB's Sales Executive Council in Washington, D.C. www.executiveboard.com www.thechallengersale.com List for March 7, 1844, is the list for September 10, 1842, amended in manuscript. The ninth book in Shannon Mayer's USA Today bestselling Rylee Adamson urban fantasy/paranormal romance series, available to the trade for the first time. "My name is Rylee and I am a Tracker." When children go missing, and the Humans have no leads, I'm the one they call. I am their last hope in bringing home the lost ones. I salvage what they cannot. One last salvage and the final battle with Orion and the demon hordes will be upon me. I don't know the name of the person I'm Tracking, or what she looks like so finding her is going to be . . . impossible. But she is the key to defeating the demons. The world has been swept with a plague that is killing not only the humans, but every supernatural it touches. While I'm out Tracking, my allies are being wiped out. Worse than all of this? I am losing Pamela to the darkness with every second that passes. I'm not sure even I can control any of these outcomes. But that doesn't mean I'm not going to try. Starring the irresistible, ass-kicking heroine Rylee Adamson, Rising Darkness is the ninth book in USA Today-bestselling author Shannon Mayer's sexy, exciting, and laugh-out-loud series, a dangerously addictive paranormal romance. This book reports on the latest advances in complex and nonlinear cardiovascular physiology aimed at obtaining reliable, effective markers for the assessment of heartbeat, respiratory, and blood pressure dynamics. The chapters describe in detail methods that have been previously defined in theoretical physics such as entropy, multifractal spectra, and Lyapunov exponents, contextualized within physiological dynamics of cardiovascular control, including autonomic nervous system activity. Additionally, the book discusses several application scenarios of these methods. The text critically reviews the current state-of-the-art research in the field that has led to the description of dedicated experimental protocols and ad-hoc models of complex physiology. This text is ideal for biomedical engineers, physiologists, and neuroscientists. This book also: Expertly reviews cutting-edge research, such as recent advances in measuring complexity, nonlinearity, and information-theoretic concepts applied to coupled dynamical systems Comprehensively describes applications of analytic technique to clinical scenarios such as heart failure, depression and mental disorders, atrial fibrillation, acute brain lesions, and more Broadens readers' understanding of cardiovascular signals, heart rate complexity, heart rate variability, and nonlinear analysis CMJ New Music Monthly, the first consumer magazine to include a bound-in CD sampler, is the leading publication for the emerging music enthusiast. NMM is a monthly magazine with interviews, reviews, and special features. Each magazine comes with a CD of 15-24 songs by well-established bands, unsigned bands and everything in between. It is published by CMJ Network, Inc. Greenfield's Neuropathology, the worlds leading neuropathology reference, provides an authoritative, comprehensive account of the pathological findings in neurological disease, their biological basis and their clinical manifestations. This account is underpinned throughout by a clear description of the molecular and cellular processes and reactions that are relevant to the development, and normal and abnormal functioning of, the nervous system. While this scientific content is of paramount importance, however, care has been taken to ensure that the information is presented in a way that is accessible to readers working within a range of disciplines in the clinical neurosciences, and that also places the neuropathological findings within the context of a broader diagnostic process. The new eighth edition incorporates much new information, new illustrations and many new authors, while retaining the depth, breadth and quality of content so praised in previous editions. Each chapter opens with an introductory section designed to offer an integrated approach to diagnosis, taking account of clinical manifestations, neuroradiological and laboratory findings as well as the neuropathological and molecular genetic features of the diseases being considered. Strong emphasis has been placed on facilitating the retrieval of neuropathological information by non-neuropathologists grappling with differential diagnoses or seeking information on broad categories of neurological disease, and boxes and tables are used to present important symptoms and signs, patterns of disease and other features for ease of reference. High quality line and photographic illustrations, the majority in full colour, are all available on a companion CD, to complete the offering. In 1902, Martha Berry founded the Industrial School for Boys to educate the children of the Southern Appalachian Mountains, and in 1909 the school admitted women. The institution grew from a mountain industrial school to a two-year college in its first twenty-four years, became a four-year college in 1930, and has since become one of the leading liberal arts colleges in the South. This volume portrays, in word and image, the role of sports at Berry College throughout its 100-year history. Situating athletics within the social and cultural life of the college, the book includes both intramural and intercollegiate sport, and traces the evolution of the Viking tradition as it both parallels and reflects the development of sport in the United States. The story begins with the recreational and leisure activities of the early years of the school and traces the continuation of the sporting spirit from the days of the "Silver and the Blue" through the post-war "Blue Jacket" tradition, and ends with the Viking years of the last four decades. Of notable interest in the book is the development of the women's sports program, which has brought four national titles to the college; the importance of soccer to the college; the well-rounded intercollegiate program, which currently fields teams in seven sports; and an excellent intramural program. The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.
