Every Haynes manual is based on a complete teardown and rebuild, contains hundreds of "hands-on" photos tied to step-by-step instructions, and is thorough enough to help anyone from a do-it-your-selfer to a professional. Haynes Manuals have a new look! To ensure the continued success of one of the industry's most dynamic manual series, Haynes has color coded their covers by manufacturer and replaced the familiar cover artwork with computer-generated cutaway photography. By Summer 2000, 80 percent of Haynes manuals will have the colorful new design. Inside, enthusiasts will find the same reliable information -- whether the reader has simple maintenance or a complete engine rebuild in mind, he or she can rest assured that there's a Haynes Manual for just above every popular domestic and import car, truck, and motorcycle. Hundreds of illustrations and step-by-step instructions make each repair easy to follow. CASL, the Common Algebraic Specification Language, was designed by the members of CoFI, the Common Framework Initiative for algebraic specification and development, and is a general-purpose language for practical use in software development for specifying both requirements and design. CASL is already regarded as a de facto standard, and various sublanguages and extensions are available for specific tasks. This book illustrates and discusses how to write CASL specifications. The authors first describe the origins, aims and scope of CoFI, and review the main concepts of algebraic specification languages. The main part of the book explains CASL specifications, with chapters on loose, generated and free specifications, partial functions, sub- and supersorts, structuring specifications, genericity and reusability, architectural specifications, and version control. The final chapters deal with tool support and libraries, and present a realistic case study involving the standard benchmark for comparing specification frameworks. The book is aimed at software researchers and professionals, and follows a tutorial style with highlighted points, illustrative examples, and a full specification and library index. A separate, complementary LNCS volume contains the CASL Reference Manual. At Last! A Beginner's Guide to Feline Technology Scratch marks on your furniture. Dead mice on your doorstep. This second edition is fully updated with contemporary studies and neuroscientific findings, to offer an engaging exploration of 25 facets of the physical and mental aging processes. Written by eminent gerontologist Patrick Rabbitt, who interprets research through his own personal daily experiences, it explores what aging really is and how to accept and manage it. It explores why our sensory and cognitive experiences change as we get older, and what these developments mean for our overall physical and emotional well-being. Key topics explored include memory, intelligence, attention, sleep, vision and hearing, taste and smell, touch and balance, anxiety, depression and perception of the passage of time. It also discusses how far we can keep and develop the skills we have mastered over our lifetimes. The Aging Mind debunks unhelpful myths about the aging process and offers guidance on how we can age better, allowing us to continue to manage and enjoy our lives. This second edition is invaluable for students and researchers of cognitive gerontology, for professionals working with clients experiencing issues around aging, and for all those interested in understanding their own, or their relatives' aging.
