musical ethnography of the Duna people of Papua New Guinea. A people who have experienced extraordinary social change in recent history, their musical traditions have also radically changed during this time. New forms of music have been introduced, while ancestral traditions have been altered or even abandoned. This study shows how, through musical creativity, Duna people maintain a connection with their past, and their identity, whilst simultaneously embracing the challenges of the present. DC:05 captures new findings relevant to diagnosis in young children and

Next Generation Sequencing (NGS) is the latest high throughput technology to revolutionize genomic research. NGS generates massive genomic datasets that play a key role in the big data phenomenon that surrounds us today. To extract signals from high-dimensional NGS data and make valid statistical inferences and predictions, novel data analytic and statistical techniques are needed. This book

contains 20 chapters written by prominent statisticians working with NGS data. The topics range from basic preprocessing and analysis with NGS data to more complex genomic applications such as copy number variation and isoform expression detection. Research statisticians who want to learn about this growing and exciting area will find this book useful. In addition, many chapters from this book could be included in graduate-level classes in statistical bioinformatics for training future biostatisticians who will be expected to deal with genomic data in basic biomedical

research, genomic clinical trials and personalized medicine. About the editors: Somnath Datta is Professor and Vice Chair of Bioinformatics and Biostatistics at the University of Louisville. He is Fellow of the American Statistical Association, Fellow of the Institute of Mathematical Statistics and Elected Member of the International Statistical Institute. He has contributed to numerous research areas in Statistics, Biostatistics and Bioinformatics. Dan Nettleton is Professor and Laurence H. Baker Endowed Chair of Biological Statistics in the Department of Statistics at Iowa State University.

He is Fellow of the American Statistical Association and has published research on a variety of topics in statistics, biology and bioinformatics. Since 1990, the social and economic policies of the transition countries of central and eastern Europe, the Caucasus and central Asia have diverged, including the way they have reformed the financing of their health systems. This book analyses this rich experience in a systematic way. It reviews the background to health financing systems and reform in these countries, starting with the legacy of the systems in the USSR and central and eastern Europe

before 1990 and the consequences (particularly fiscal) of the transition for their organization and performance. From practical experience of implementing, advising or evaluating health financing policies in the region, the authors offer important lessons, as well as pitfalls to avoid in the reform process. This book is essential reading for health finance policy-makers, advisers and analysts in this region and beyond. sooner produce beneficial results than in the Solomons ... Here is an object worthy indeed the devotion of one's life'. Charles Morris Woodford devoted his working life to pursuing this dream, becoming the first British Resident Commissioner in 1897 and remaining in office until 1915, establishing the colonial state almost singlehandedly. His career in the Pacific extended beyond the Solomon Islands. He worked briefly for the Western Pacific High Commission in Fiji, was a temporary consul in Samoa, and travelled as a Government Agent on a small labour

vessel returning indentured workers to the Gilbert Islands. As an independent naturalist he made three successful expeditions to the islands, and even climbed Mt Popomanaseu, the highest mountain in Guadalcanal. However, his natural history collection of over 20,000 specimens, held by the British Museum of Natural History, has not been comprehensively examined. The British Solomon Islands Protectorate was established in order to control the Pacific Labour Trade and to counter possible expansion by French and German colonialists. It

remaining an impoverished, largely neglected protectorate in the Western Pacific whose economic importance was large-scale copra production, with its copra considered the second-worst in the world. This book is a study of Woodford, the man, and what drove his desire to establish a colonial protectorate in the Solomon Islands. In doing so, it also addresses ongoing issues: not so much why the independent state broke down, but how imperfectly it was put together in the first place. The unofficial Dyson DC07 workshop manual. Recent developments in computer technology are providing historians with new ways to see—and seek to hear, touch, or smell—traces of the past. Place-based augmented reality applications are an increasingly common feature at heritage sites and museums, allowing historians to create

immersive, multifaceted learning experiences. Now that computer vision can be directed at the past, research involving thousands of images can recreate lost or destroyed objects or environments, and discern patterns in vast datasets that could not be perceived by the naked eye. *Seeing the Past with Computers* is a collection of twelve thought-pieces on the current and potential uses of augmented reality and computer vision in historical research, teaching, and presentation. The experts gathered here reflect upon their experiences working with new

technologies, share their ideas for best practices, and assess the implications of—and imagine future possibilities for—new methods of historical study. Among the experimental topics they explore are the use of augmented reality that empowers students to challenge the presentation of historical material in their textbooks; the application of seeing computers to unlock unusual cultural knowledge, such as the secrets of vaudevillian stage magic; hacking facial recognition technology to reveal victims of racism in a century-old Australian archive; and rebuilding the

soundscape of an Iron Age village with aural augmented reality. This volume is a valuable resource for scholars and students of history and the digital humanities more broadly. It will inspire them to apply innovative methods to open new paths for conducting and sharing their own research. Covers the whole range of potential complications of PCI Only book exclusively dedicated to the risks of PCI Complements available texts that detail interventional cardiology Supports physicians in improving care by anticipating or recognizing problems Appeals

to cardiologists or interventional radiologists Addresses cardiac arrest, legal matters and adverse event reporting Essential information is easily accessible in useful tables Text is logically organized and richly illustrated with 184 illustrations on 210 pages The collection of Barbara and Lawrence Fleischman of New York is one of the most important private collections of ancient Greek and Roman art in the United States and among the most important in the world. Composed of approximately three hundred objects from the Bronze Age to the Late

Antique, it includes bronze statuettes, marble sculpture, vases, jewelry, lamps and candelabra, keys, weights, and silver bowls and utensils. The Fleischmans have a particular fascination with pieces associated with everyday life in antiquity, since these objects evoke a human connection to the past. They are also drawn to pieces that exemplify the human propensity to transform a functional object into a thing of beauty. Not only has their emotional response to an object's aesthetic appeal or its historical significance guided them in their forty years of collecting, personal interests

have been at work as well. The large number of pieces related to the theater or representing theatrical subjects reflects Barbara Fleischman's lifelong love of that art. *A Passion for Antiquities* contains photographs and extensive catalogue entries on the objects included in the exhibition at the J. Paul Getty Museum and the Cleveland Museum of Art. Eighteen contributors provide art historical and descriptive information about each piece. The objects not selected for the exhibition are detailed in a checklist that specifies their origins, dates, media, and sizes.

This book is the first major reference on the entire collection, since most of the objects have never before been publicly shown. To facilitate finding specific objects or groups of objects, the book is organized first chronologically and then by medium. Bibliographic sources for each entry cite both publications where the specific work is discussed as well as references to related scholarship. Karol Wight provides a chronological overview of the collection, and Oliver Taplin relates selected pieces to the development of Greek theater. The exhibition of

Barbara and Lawrence Fleischman's collection and this catalogue allow us to enter into their minds and emotions so that, for a time, we can share their passion for antiquities. *Sequence - Evolution - Function* is an introduction to the computational approaches that play a critical role in the emerging new branch of biology known as functional genomics. The book provides the reader with an understanding of the principles and approaches of functional genomics and of the potential and limitations of computational and experimental approaches to

genome analysis. Sequence - Evolution - Function should help bridge the "digital divide" between biologists and computer scientists, allowing biologists to better grasp the peculiarities of the emerging field of Genome Biology and to learn how to benefit from the enormous amount of sequence data available in the public databases. The book is non-technical with respect to the computer methods for genome analysis and discusses these methods from the user's viewpoint, without addressing mathematical and algorithmic details. Prior practical familiarity with the basic methods for

sequence analysis is a major advantage, but a reader without such experience will be able to use the book as an introduction to these methods. This book is perfect for introductory level courses in computational methods for comparative and functional genomics. Greywater Reuse examines the features and implications of greywater reuse scientifically, quantitatively, and thoroughly. Based on the authors' extensive studies of treatment facilities in urban and rural environments, development of greywater treatment systems, and research of potential environmental and health risks posed by greywater at different treatment levels, this authoritative text: Describes the chemical, physical, and microbial properties of greywater Covers

the treatment and removal of greywater pollutants, providing case studies of common methods Identifies the risks involved in greywater use and proposes regulatory measures to help reduce these risks Reviews the greywater management strategies, policies, and legislation of several different countries Discusses the prevailing public perception and willingness to adopt various uses of greywater Analyzes the economic impact of greywater reuse from both the consumer and national perspectives Greywater Reuse addresses all major aspects related to

greywater reuse, making it a valuable resource for a variety of applications. Published in 1994, Zero to Three's Diagnostic Classification of Mental Health and Developmental Disorders of Infancy and Early Childhood (DC:0-3) was the first developmentally based system for diagnosing mental health and developmental disorders in infants and toddlers. Its diagnostic categories reflected the consensus of a multidisciplinary group of experts in early childhood development and mental health. DC:0-3R enhances your ability to prevent, diagnose, and treat mental

health problems in the earliest years of identifying and describing disorders not addressed in other classification systems and by pointing the way to effective intervention approaches. Mental health clinicians, counselors, physicians, nurses, early interventionists, early childhood educators, and researchers will find DC:0-3R to be an indispensable guide to evaluation and treatment planning with infants, toddlers, and their families in a wide range of settings. All too often, defining a discipline becomes more an exercise of exclusion than inclusion.

Disrupting the Digital Humanities seeks to rethink how we map disciplinary terrain by directly confronting the gatekeeping impulse of many other so-called field-defining collections. What is most beautiful about the work of the Digital Humanities is exactly the fact that it can't be tidily anthologized. In fact, the desire to neatly define the Digital Humanities (to filter the DH-y from the DH) is a way of excluding the radically diverse work that actually constitutes the field. This collection, then, works to push and prod at the edges of the Digital Humanities - to

open the Digital Humanities rather than close it down. Ultimately, it's exactly the fringes, the outliers, that make the Digital Humanities both lovely and rigorous. This collection does not constitute yet another reservoir for the new Digital Humanities canon. Rather, our aim is less about assembling content as it is about creating new conversations. Building a truly communal space for the digital humanities requires that we all approach that space with a commitment to: 1) creating open and non-hierarchical dialogues; 2) championing non-traditional work that might not

otherwise be recognized through conventional scholarly channels; 3) amplifying marginalized voices; 4) advocating for students and learners; and 5) sharing generously to support the work of our peers. Kim, "#DecolonizeDH or A Practical Guide to Making DH Less White" This open access book brings together discourse on children and peace from the 15th International Symposium on the Contributions of Psychology to Peace, covering issues pertinent to children and peace and approaches to making their world safer, fairer and more sustainable. The book is divided into nine sections that examine traditional themes (social construction and deconstruction of diversity, intergenerational transitions and memories of war, and multiculturalism), as well as contemporary

issues such as Europe's "migration crisis", radicalization and violent extremism, and violence in families, schools and communities. Chapters contextualize each issue within specific social ecological frameworks in order to reflect on the multiplicity of influences that affect different outcomes and to discuss how the findings can be applied in different contexts. The volume also provides solutions and hope through its focus on youth empowerment and peacebuilding programs for children and families. This forward-thinking volume offers a multitude of views,

approaches, and strategies for research and activism drawn from peace psychology scholars and United Nations researchers and practitioners. This book's multi-layered emphasis on context, structural determinants of peace and conflict, and use of research for action towards social cohesion for children and youth has not been brought together in other peace psychology literature to the same extent. *Children and Peace: From Research to Action* will be a useful resource for peace psychology academics and students, as well as social and developmental psychology

academics and students, peace and development practitioners and activists, policy makers who need to make decisions about the matters covered in the book, child rights advocates and members of multilateral organizations such as the UN. Over the past 20 years, CTO lesions have represented the most difficult anatomy for treatment — with lower success rates and higher complication rates. Chronic Total Occlusions provides

interventionalists insight into the world of CTOs with introductory chapters that describe the pathology and indications of CTOs along with a review of clinical trials. Imaging modalities including CT angiography, magnetic navigation wire, and IVUS guided recanalization of CTO are also introduced, together with information on new wires technology and devices for CTOs. With numerous illustrations of these devices, technologies, and strategies to improve the CTO success rate, this clinical guide, headed up by Ron Waksman, will

prove to be the ideal companion for interventional cardiologists and cardiac surgeons who are required to perform angioplasty and coronary stenting. The Biology and Therapeutic Application of Mesenchymal Cells comprehensively describes the cellular and molecular biology of mesenchymal stem cells and mesenchymal stromal cells, describing their therapeutic potential in a wide variety of preclinical models of human diseases and their mechanism of action in these preclinical models. Chapters also discuss the current status of the use of

mesenchymal stem and stromal cells in clinical trials in a wide range of human diseases and disorders, for many of which there are limited, or no other, therapeutic avenues. Provides coverage on both the biology of mesenchymal stem cells and stromal cells, and their therapeutic applications. Discusses the current status of mesenchymal stem and stromal cells in clinical trials in a

wide range of human diseases and disorders, for many of which there are limited, or no other, therapeutic avenues. Written and edited by leaders in the field. The Biology and Therapeutic Application of Mesenchymal Cells is an invaluable resource for those studying stem cells, cell biology, genetics, gene or cell therapy, or regenerative medicine. Iodine is an essential micronutrient and an integral component of the thyroid hormones, which are required for normal growth and development. The iodine deficiency disorders (IDD) encompass a spectrum of adverse health

effects including goiter, cretinism, hypothyroidism, growth retardation, and increased pregnancy loss and infant mortality. This volume summarizes the current understanding of the effects of iodine deficiency as well as iodine excess. It also discusses best practices for salt iodization, the mainstay of global IDD prevention efforts, and other forms of food fortification. The effectiveness of iodine supplementation for vulnerable populations, an evolving strategy in many regions, is also described. Low level environmental exposure to chemicals such as perchlorate and

thiocyanate, which competitively block thyroidal iodine uptake, appears to be ubiquitous worldwide. There has been recent concern that such environmental exposures might pose a health hazard by inducing or aggravating underlying thyroid dysfunction. This up-to-date volume explores both the effects of iodine deficiency as well as the best strategies for IDD prevention. Owing to climate change related uncertainties and anticipated population growth, different parts of the developing and the developed world (particularly urban areas) are experiencing water shortages or

flooding and security of fit-for-purpose supplies is becoming a major issue. The emphasis on decentralized alternative water supply systems has increased considerably. Most of the information on such systems is either scattered or focuses on large scale reuse with little consideration given to decentralized small to medium scale systems. *Alternative Water Supply Systems* brings together recent research into the available and innovative options and additionally shares experiences from a wide range of contexts from both developed and developing countries. *Alternative Water*

Supply Systems covers technical, social, financial and institutional aspects associated with decentralized alternative water supply systems. These include systems for greywater recycling, rainwater harvesting, recovery of water through condensation and sewer mining. A number of case studies from the UK, the USA, Australia and the developing world are presented to discuss associated environmental and health implications. The book provides insights into a range of aspects associated with alternative water supply systems and an evidence base (through case

studies) on potential water savings and trade-offs. The information organized in the book is aimed at facilitating wider uptake of context specific alternatives at a decentralized scale mainly in urban areas. This book is a key reference for postgraduate level students and researchers interested in environmental engineering, water resources management, urban planning and resource efficiency, water demand management, building service engineering and sustainable architecture. It provides practical insights for water professionals such

as systems designers, operators, and decision makers responsible for planning and delivering sustainable water management in urban areas through the implementation of decentralized water recycling. Firstly, usability is defined and a framework for identifying different aspects of usability is given. The main principles for creating usable designs are expounded, followed by practical advice as to how to design usable products. The book then tackles the issue of usability evaluation - a series of evaluation methods are described, followed by practical advice as to how to conduct

the evaluation. The book draws on examples from software design and product design

generally. This means whilst human-computer interaction HCI is a central issue in the book, other

usability issues are also covered.
