"Solving Social Dilemmas demonstrates that social, political, and economic progress occur when ethical dispositions evolve in a manner that solves or ameliorate social dilemmas. That same process can account for the emergence of prosperous societies in the West during the late nineteenth and early twentieth centuries. It was substantially a consequence of increased moral support for commerce and careers in commerce that had emerged during the previous two centuries. To support these claims, two analytical histories are developed. The first uses elementary game theory to illustrate how critical social dilemmas can be solved by internalized ethical ideas about "proper" or "moral" conduct. That analytical history implies that in the absence of solutions to critical social dilemmas-of which there are many thousands-social, political, and economic development tends to be curtailed. The second analytical history surveys three centuries of ethical assessments concerning the proper role of commerce in a good life and good society. The authors reviewed all used economic illustrations to illustrate moral principles or how they may be applied. Because the illustrating examples are ones that their readers would have found "obvious," they shed light on the ethical dispositions in the communities to whom those works were addressed. Together, they reveal that concerns about the effects of market son ethical dispositions were diminishing during the centuries before the great acceleration of commerce in the nineteenth century. In fact,

many of the authors reviewed argued that there was a complete harmony between ethical dispositions and commerce. Together the two narratives imply that shifts in norms directly and indirectly account for the relative prosperity of the West compared to other parts of the World during the twentieth century. It turns out that flourishing commercial societies have moral foundations"-- Learn to provide state-of-the-art care to any patient in any setting with the most comprehensive trauma nursing resource available. The iGeneration has learned to adapt rapidly to technological change. Tech-savvy students multi-task with consummate ease, accessing email

on smart-phones, researching assignments on tablets, reading a book on Kindle, while drinking a flat white and listening to iTunes in the background. How does the tertiary educational curriculum meet the learning needs of students whose attention transitions rapidly between mediums and messages? The complexity and pace of modern technological change has left the theological educational sector gasping, as it struggles to devise pedagogically engaging online distance learning materials in traditional disciplines and teach units with significant relational and pastoral components. The technological benefits are vast, the instant availability of information unprecedented, and the opportunities to provide theological education to groups marginalised by the tyranny of distance and time enormous. How should the theological sector address these challenges and opportunities? Although the benefits are massive, the media is replete with stories of the casualties of technological change, including cyber-bullying, internet predators, the psychic damage from trolls, addiction to gaming, and issues of body image, among others. How should the theological sector, drawing upon its scriptural and teaching heritage, come to grips with the deficits spawned by the technological revolution? What is the theological, pastoral, social and pedagogic responsibility of theology teachers in nurturing this new generation? Teaching Theology in a Technological Age draws together in an inspiring volume a series of cutting-edge essays from Australian, New Zealand and South African scholars on the learning and teaching of theology in a digital age. How did games rise to become the central audiovisual form of expression and storytelling in digital culture? How did the practices of their artistic production come into being? How did the academic analysis of the new medium's social effects and cultural meaning develop? Addressing these fundamental questions and aspects of digital game culture in a holistic way for the first time, Gundolf S. Freyermuth's introduction outlines the media-historical development phases of analog and digital games, the history and artistic practices of game design, as well as the history, academic approaches, and most important research topics of game studies. With contributions by André Czauderna, Nathalie Pozzi and Eric Zimmerman. This text examines the intersection of youth civic engagement, identity, and protest in Hong Kong, through the lens of education. It explores how education and identity have been protested in Hong Kong, historically and today, and the mark that such contestations have left on education. Many people, particularly outside Hong Kong, were astonished by youth participation in the Umbrella Movement of 2013–2014, and the anti-extradition law protests in 2019. These protests have caused people to consider what has changed in Hong Kong over time, and what education has to do with youth civic engagement and political expression. This book provides an academic, theoretically oriented perspective on the intersection of youth identity and education in Hong Kong. Coming from an educational (and philosophical) orientation, Jackson focuses on areas where greater understanding, and greater potential agreement, might be developed, when it comes to education. This book will be of interest to educational policy makers, curriculum specialists, and educational scholars and students in liberal studies, social studies, civic education, comparative and international education, multicultural education, and youth studies. In this scholarly book, a century's theology presented by the Faculty of Theology at the University of Pretoria, is celebrated. All authors are academics or research associates of the University of Pretoria. A historical and futuristic overview with perspectives from the past, present and future, are examined. The past is not only portrayed by means of societal and scientific contributions and achievements, but the authors also reflect on malfunctions, ill behaviour and disappointments of church and theology, presented at the University of Pretoria within the South African context over 100 years. The book commences with a chapter in which institutional transformation is discussed, as well as the changes that demonstrate the role of the Faculty of Theology within a secular state university. It includes an explanation of the importance of research

impact, research productivity and research reputation. Among various discipline indicators, the category Theology and Religion Studies plays a significant role in the measurement of world university rankings of universities. With regard to scientific and encyclopaedic content, the book focuses on the theological disciplines presented in the academic curricula: first the biblical sciences (Old and New Testament Studies), then the historical disciplines (Systematic Theology, Church History and Church Polity), and finally the practical disciplines (Practical Theology, Science of Religion and Missiology). The role of Religion Studies in a newly established Faculty of Theology and Religion not only enhances the diversity of interreligious tolerance and an atmosphere of dialogue, but it serves as platform to interconnect with the fields of Humanities, Social and Natural Sciences and other academic disciplines. In the conclusive part of the book, contributions highlight the role of the centres in the Faculty (Centre for Contextual Ministry and Centre for Sustainable Communities), as well as the continental and international footprints of the two theological journals whose title ownership is attached to the Faculty of Theology of the University of Pretoria, namely HTS Theological Studies and *Verbum et Ecclesia*. The methodology comprised in all the chapters amounts to a literature and contextual study. Since the book describes the histories of formal academic departments, these texts are of a descriptive, interpretative and critical character. Reference is made in some chapters to exegetical methods, like the historical critical methods. The target audience of the book is academic scholars and theologians, who specialise in the different fields of Theology, the Humanities and other Social Sciences. The book is also accessible to scholars of other academic disciplines outside these disciplines. The book comprises original research by several authors and is not plagiarised from other scientific publications of this nature. Self-care involves taking action to support, protect or maintain wellbeing. Relationships have a significant influence on these acts of self-care and one's sense of wellbeing. Relationships are fundamental to individual meaning-making and crucial to the world of academia. In this edited collection, authors navigate how they view relationships as a crucial part of their wellbeing and acts of self-care, exploring the "I", "We", and "Us" at the centre of self-care and wellbeing embodiment. Each chapter unpacks this idea in varying ways that demonstrate that relationships are a fundamental element of both work and personal life and how they intersect with wellbeing. The authors present critical discussion through visual narratives, lived experiences, and strategies that highlight how relationships, seeking social support, scaffolding opportunities to learn with and from each other, and changes in practise become acts of self-care individually and collectively. There has arguably never been a more important time to raise awareness of self-care and wellbeing as central to the nature of work in higher education. *Healthy Relationships in Higher Education: Promoting Wellbeing Across Academia* highlights new ways of working in higher education that disrupt current tensions that neglect wellbeing and will be of interest to anyone working in this environment. This essay collection addresses the paradox that something may at once "be" and "not be" Shakespeare. This phenomenon can be a matter of perception rather than authorial intention: audiences may detect Shakespeare where the author disclaims him or have difficulty finding him where he is named. Douglas Lanier's "Shakespearean rhizome," which co-opts Deleuze and Guattari's concept of artistic relations as rhizomes (a spreading, growing network that sprawls horizontally to defy hierarchies of origin and influence) is fundamental to this exploration. Essays discuss the fine line between "Shakespeare" and "not Shakespeare" through a number of critical lenses—networks and pastiches, memes and echoes, texts and paratexts, celebrities and afterlives, accidents and intertexts—and include a wide range of examples: canonical plays by Shakespeare, historical figures, celebrities, television performances and adaptations, comics, anime appropriations, science fiction novels, blockbuster films, gangster films, Shakesploitation and teen films, foreign language films, and

non-Shakespearean classic films. An existential therapy handbook from those in the field, with its broad scope covering key texts, theories, practice, and research The Wiley World Handbook of Existential Therapy is a work representing the collaboration of existential psychotherapists, teachers, and researchers. It's a book to guide readers in understanding human life better through the exploration of aspects and applications of existential therapy. The book presents the therapy as a way for clients to explore their experiences and make the most of their lives. Its contributors offer an accurate and in-depth view of the field. An introduction of existential therapy is provided, along with a summary of its historical foundations. Chapters are organized into sections that cover: *daseinsanalysis*; existential-phenomenological, -humanistic, and -integrative therapies; and existential group therapy. International developments in theory, practice and research are also examined. This anthropological study explores the beliefs and practices that emerged around masking in the U.S. during the COVID-19 pandemic. Americans responded to this illness as unique subjects navigating the flux of social and corporeal boundaries, supporting certain beliefs and acting to shape them as compelling realities. Debates over health and safety mandates indicated that responses were fractured with varied subjectivities in play—people lived in different worlds and bodies were central in conflicts over breathing, masking and social distancing. Contrasting approaches to practices marked the limits and possibilities of imaginaries, signaling differences and similarities between groups, and how actions could be passageways between people and possibilities. During a time of uncertainty and loss, the "efficacious intimacy" of bodies and materials embedded beliefs, values, and emotions of care in mask sewing and usage. By exploring these practices, the author reflects on how American subjects became relational selves and sustained response-able communities, helping people protect each other from mutating viruses as well as moving forward in a shifting terrain of intimacy and distance, connection, and containment. Research on patent valuation has become increasingly important in academic and policy circles in the last few decades. In part, this is the outcome of the wide consensus that innovation is a crucial ingredient for growth at various levels. On the other hand, there has also been an overcoming of growth models unilaterally focused on technological-oriented approaches. This book presents novel and original research on patent value determinants, which are intrinsic or extrinsic to the innovator's business model. Grid Thoma has undertaken a long study on the strategic factors affecting patent valuation, bringing extensive quantitative evidences across various geographical and institutional contexts. Beforehand, the valuation of the patent real options is appraised when the innovator can postpone the additional investment required for the patent's successful exploitation. Then, he analyses what other complementary IP strategies are combined with patenting that in turn directly affect the value of patents. Moreover, the book scrutinizes the so-called 'strategic patenting' hypothesis according to which innovators obtain patents for other reasons beyond gaining IP protection. A second order of strategic factors affecting the value of patents resides at the outset of the invention process. These are constituted by knowledge spillovers, which are typically mediated by the local geographical context where the invention process takes place. The analysis shows that the contribution of knowledge spillovers from business and nonbusiness organizations to the value of the patented R&D constitutes a relevant aspect for an innovator's decision making. This thoughtful, cutting-edge research book is vital reading for researchers, academics, and policy decision makers in the area of in market valuation, management of technology, innovation management, and economic geography. Understanding Community Colleges provides a comprehensive review of the community college landscape—management and governance, finance, student demographics and development, teaching and learning, policy, faculty, and workforce development—and bridges the gap between research and practice. This contributed volume brings together highly

respected scholars in the field who rely upon substantial theoretical perspectives—critical theory, social theory, institutional theory, and organizational theory—for a rich and expansive analysis of community colleges. The latest text to publish in the Core Concepts in Higher Education series, this exciting new text fills a gap in the higher education literature available for students enrolled in Higher Education and Community College graduate programs. This text provides students with: A review of salient research related to the community college field. Critical theoretical perspectives underlying current policies. An understanding of how theory links to practice, including focused end-of-chapter discussion questions. A fresh examination of emerging issues and insight into contemporary community college practices and policy. This book explores the causes and consequences of the contradictions in young people's lives stemming from the affluence–purpose paradox: a lack of purpose-in-life among many of those living in the most affluent societies in human history. This paradox is endemic to identity societies where people experience a choice-contingent life course, and is examined using an interdisciplinary approach—largely with an integration of developmental psychology and sociology, but also using historical, anthropological, economic, and political perspectives. The transition to adulthood is now commonly a prolonged process, with young people facing a number of psychological challenges and sociological obstacles in their identity formation. Challenges include difficulties in making prudent choices about goals. Obstacles involve cross-pressures in the wider society as well as in educational institutions. Consequently, many youth experience their education as alienating and stressful rather than as an opportunity for personal development. Those without a sense of purpose have more difficulties with their identity formation that can produce symptoms of anxiety and depression. The current student mental health crisis is examined in this context. An additional challenge is an ambiguously defined adulthood. Young people who are confused about appropriate adult roles often value hedonistic activities rooted in narcissism and materialism rather than in more fulfilling long-term goals. Conversely, those who are agentic in their personal development can thrive in adulthood, especially when they combine agency with generativity. This book ends with a series of recommendations for researchers and policy makers to help youth cope with the affluence–purpose paradox. The internet of things (IoT) enhances customer experience, increases the amount of data gained through connected devices, and widens the scope of analytics. This provides a range of exciting marketing possibilities such as selling existing products and services more effectively, delivering truly personalized customer experiences, and potentially creating new products and services. *Smart Marketing With the Internet of Things* is an essential reference source that discusses the use of the internet of things in marketing, as well as its importance in enhancing the customer experience. Featuring research on topics such as augmented reality, sensor networks, and wearable technology, this book is ideally designed for business professionals, marketing managers, marketing strategists, academicians, researchers, and graduate-level students seeking coverage on the use of IoT in enhancing customer marketing outcomes. *Existential Psychology East-West* is a collection of chapters exploring existential psychology in a cross-cultural context. The original version was published in preparation for the First International Conference on Existential Psychology held in Nanjing, China in 2010. This revised and expanded edition includes several updated chapters as well as four new chapters. The book consists of three sections. The first section provides an introduction to existential-humanistic psychotherapy along with a case illustration. Section two contains 13 chapters from Eastern and Western scholars exploring the theory of existential psychology. The third section contains 10 chapters building from Rollo May's work on myth. Each chapter explores the existential themes of a myth embedded within a particular cultural context. The book concludes with an Annotated Bibliography of important works in existential psychology.

Existential Psychology East-West is an important contribution to the field with many influential Eastern and Western scholars including Kirk Schneider, Xuefu Wang, Ilene Serlin, Mark Yang, Ed Mendelowitz, Heyong Shen, Erik Craig, Myrtle Heery, Alan G. Vaughan, Louis Hoffman, and Nathaniel Granger, Jr. *Mine Design, Planning and Sustainable Exploitation in the Digital Age* covers mine planning, design and exploitation taking cognizance of new developments, especially those associated with the Fourth Industrial Revolution and the positive influence that it has, and will have, on the mining industry. It refers to latest best practices with emphasis on the social license to operate and sustainable (green) mining. The book covers surface and underground mining in some detail and addresses relevant associated aspects such as risk management, green mining and the importance of real community relations. It is organized as follows: Surface Mining Underground Soft Rock Mining Underground Hard Rock (Metal/Non-metal) Mining Green and Sustainable Mining. It has many relevant photos and figures that help the reader and includes appropriate support design and types commonly used in the various mining methods. *Mine Design, Planning and Sustainable Exploitation in the Digital Age* is mainly aimed at mining, geological engineering and other undergraduate and postgraduates interested in the mining resources industry. It will also serve as a useful reference book for practitioners in the mining industry who want an easy-to-use book. The purpose and aim of this book is to develop an appropriate leadership model for missional churches. This implies a positioning of this book within the broader theology of mission and a consensus on the theology of the *Missio Dei*, originating at the 1952 conference of the International Missionary Council in Willingen, Germany. In this approach to the theology of mission, mission is understood as the work of the Trinitarian God, and the church is privileged to participate in God's mission. It is against this background that the growing consensus on missional ecclesiology challenges leadership models developed for a different time and a different kind of church (with less or no emphasis on the missional character of the church). The aim is to reflect theologically on the role of leadership in the missional church. What kind of ideas about power, authority and leadership are appropriate for a missional church? New missional challenges demand new ideas about missional leadership. Church organisation and leadership reflects a theological position – there is a strong relation between ecclesiology and church organisation. The nature of the church provides the framework to understand the character of the church. What the church is determines what the church does. The church organises what it does and agrees on rules that regulate ministries and organisation. Issues such as the way the church organises and governs what it does, and thus church leadership, need to be answered against this background and understanding. Church polity and organisation, as well as leadership, must reflect the identity, calling, life and order of the church. This book, therefore, addresses life in the Trinity, participation in the *Missio Dei* and contours of the missional church as the point of entry to develop leadership insights. It contributes towards the development of an appropriate model of leadership for missional churches, because although recent developments in the theology of mission comprehensively addressed the area of missional ecclesiology, there is a gap in the development of a leadership model based on the concept of authority in the missional church. What is humanity's ultimate destiny? Could there be life beyond the grave? What is genuine spirituality? These questions and many more are answered by a carpenter's son, Jesus, born in ancient Judaea two thousand years ago. He healed thousands, yet never received medical training. He taught in streets, homes, and temples, yet never achieved scholarly status. He demanded perfection, yet chose the imperfect to follow him. He spoke of the arrival of an eternal kingdom, yet he never ran for political office or led a nation. He spoke of peace and love, yet led the greatest counter-revolutionary effort in human history. Despised by his critics and revered by society's lowest members, Jesus still speaks to our deficiencies as well as our weaknesses, and

assures a redemption we could never achieve on our own. Out of an original rebellion, we all face a self-imposed defeat by pointlessly attempting to establish our own kingdoms despite confronting the same abysmal fate. Yet, God has achieved the greatest comeback in history by conquering death, and in doing so, has prepared for us a victory we could not possibly imagine, for to lose all is to gain all. The significance of Plato's literary style to the content of his ideas is perhaps one of the central problems in the study of Plato and Ancient Philosophy as a whole. As Samuel Scolnicov points out in this collection, many other philosophers have employed literary techniques to express their ideas, just as many literary authors have exemplified philosophical ideas in their narratives, but for no other philosopher does the mode of expression play such a vital role in their thought as it does for Plato. And yet, even after two thousand years there is still no consensus about why Plato expresses his ideas in this distinctive style. Selected from the first Latin American Area meeting of the International Plato Society (www.platosociety.org) in Brazil in 2012, the following collection of essays presents some of the most recent scholarship from around the world on the wide range of issues related to Plato's dialogue form. The essays can be divided into three categories. The first addresses general questions concerning Plato's literary style. The second concerns the relation of his style to other genres and traditions in Ancient Greece. And the third examines Plato's characters and his purpose in using them. This book focuses on the very nature and function of intuitive thought. It presents an up-to-date scientific model on how the non-conscious and intuitive thought processes work in human beings. The model is based on mainstream theorizing on intuition, as well as qualitative meta-analysis of the empirical data available in the research literature. It combines recent work in the fields of philosophy of mind, cognitive psychology and positive psychology. While systematic research in intuition is relatively new, there is an abundance of positions advocating more or less imaginative ideas of what intuition is about, ranging from quantum mechanical phenomena to new age ideologies. Research in the past few decades, in particular by proponents of the dual processing theory of thought such as Daniel Kahneman and Jonathan Evans, offers powerful tools to address and evaluate the question of intuition without the need to resort to spiritual entities. Within the framework of the dual processing theory, backed up by findings in positive psychology, intuition turns out to be the capacity to carry out complex cognitive operations within a specific domain of operations familiar to the agent. As the first extensive exploration of contemporary third wave HCI, this handbook covers key developments at the leading edge of human-computer interactions. Now in its second decade as a major current of HCI research, the third wave integrates insights from the humanities and social sciences to emphasize human dimensions beyond workplace efficiency or cognitive capacities. The earliest HCI work was strongly based on the concept of human-machine coupling, which expanded to workplace collaboration as computers came into mainstream professional use. Today HCI can connect to almost any human experience because there are new applications for every aspect of daily life. Volume 1 - Technologies covers technical application areas related to artificial intelligence, metacreation, machine learning, perceptual computing, 3D printing, critical making, physical computing, the internet of things, accessibility, sonification, natural language processing, multimodal display, and virtual reality. Volume IV of The Handbook of Systemic Family Therapy considers family-level interventions for issues of global public health. Information on the effectiveness of relational treatment is included along with consideration of the most appropriate modality for treatment. Developed in partnership with the American Association for Marriage and Family Therapy (AAMFT), it will appeal to clinicians, such as couple, marital, and family therapists, counselors, psychologists, social workers, and psychiatrists. It will also benefit researchers, educators, and graduate students involved in CMFT. This exciting volume brings together leading figures across existential

psychology in a clear-sighted guide to its current practice and therapeutic possibilities. Its accessible yet scholarly presentation dispels common myths about existential psychotherapy while demonstrating core methods and innovative techniques as compatible with the range of clinicians' theoretical orientations and practical approaches. Chapters review the evidence for its therapeutic value, and provide updates on education, training, and research efforts in the field, both in the US and abroad. Throughout, existential psychotherapy emerges as a vital, flexible, and empirically sound modality in keeping with the current—and future—promotion of psychological well-being. Highlights of the coverage include: Emotion, relationship, and meaning as core existential practice: evidence-based foundations. · Meaning-centered psychotherapy: a Socratic clinical practice. Experience processing as an aspect of existential psychotherapy: life enhancement methodology. Structural Existential Analysis (SEA): a phenomenological method for therapeutic work. Experiencing change: an existential perspective. Creating the World Congress for existential therapy. Clarifying and Furthering Existential Psychotherapy will spark discussion and debate among students, therapists, researchers, and practitioners in existential psychology, existential psychotherapy, and allied fields as well as the interested public. It makes a suitable text for graduate courses in existential therapy, psychological theories, and related subjects.

Will Darling came back from the Great War with a few scars, a lot of medals, and no idea what to do next. Inheriting his uncle's chaotic second-hand bookshop is a blessing...until strange visitors start making threats. First a criminal gang, then the War Office, both telling Will to give them the information they want, or else. Will has no idea what that information is, and nobody to turn to, until Kim Secretan—charming, cultured, oddly attractive—steps in to offer help. As Kim and Will try to find answers and outrun trouble, mutual desire grows along with the danger. And then Will discovers the truth about Kim. His identity, his past, his real intentions. Enraged and betrayed, Will never wants to see him again. But Will possesses knowledge that could cost thousands of lives. Enemies are closing in on him from all sides—and Kim is the only man who can help.

A 1920s m/m romance trilogy in the spirit of Golden Age pulp fiction. This image atlas and reference book is written in simple language that can be understood by a broad audience. The work comprehensively explains the geomorphological forms of high mountains using many examples like glacial erosion forms and deposits such as moraines and gravel terraces, which are illustrated with numerous photographs. Landslide landscapes, volcanoes, weathering, and erosion are other examples discussed. These examples are from across the world, including the Himalayas, the Alps, the Andes, and the Southern Alps of New Zealand. This work is useful for laymen who are interested in geosciences, especially high-mountain landforms, as well as for students and teachers of earth sciences.

Catherine O'Brien draws on the structure of Dante Alighieri's *Divine Comedy* to explore Martin Scorsese's feature films from *Who's That Knocking at My Door* (1967-69) to *Silence* (2016). This is the first full-length study to focus on the trajectory of faith and doubt during this period, taking very seriously the oft-quoted words of the director himself: 'My whole life has been movies and religion. That's it. Nothing else.' Films discussed include *GoodFellas*, *The Last Temptation of Christ*, *Taxi Driver* and *Mean Streets*, as well as the more recent *The Wolf of Wall Street*. In Dante's poem in 100 cantos, the Pilgrim is guided by the poet Virgil down through the circles of Hell in *Inferno*; he then climbs the steep Mountain of the Seven Deadly Sins in *Purgatory*; and he finally encounters God in *Paradise*. Embracing this popular analogy, this study envisions Scorsese as a contemporary Dante, with his filmic oeuvre offering the dimensions of a cinematic *Divine Comedy*. Drawing on debates at the heart of religious studies, theology, literature and film, this book goes beyond existing explorations of religion in Scorsese's work to address issues of sin and salvation within the context of wider debates in eschatology and the afterlife. Showcases the latest theory and application of social construction across a

range of disciplines with a focus on real-world practice in addition to theoretical work, thus making it useful for advanced students, scholars, and practitioners alike. The world has become increasingly networked and unpredictable. Decision makers at all levels are required to manage the consequences of complexity every day. They must deal with problems that arise unexpectedly, generate uncertainty, are characterised by interconnectivity, and spread across traditional boundaries. Simple solutions to complex problems are usually inadequate and risk exacerbating the original issues. Leaders of international bodies such as the UN, OECD, UNESCO and WHO — and of major business, public sector, charitable, and professional organizations — have all declared that systems thinking is an essential leadership skill for managing the complexity of the economic, social and environmental issues that confront decision makers. Systems thinking must be implemented more generally, and on a wider scale, to address these issues. An evaluation of different systems methodologies suggests that they concentrate on different aspects of complexity. To be in the best position to deal with complexity, decision makers must understand the strengths and weaknesses of the various approaches and learn how to employ them in combination. This is called critical systems thinking. Making use of over 25 case studies, the book offers an account of the development of systems thinking and of major efforts to apply the approach in real-world interventions. Further, it encourages the widespread use of critical systems practice as a means of ensuring responsible leadership in a complex world. Comments on a previous version of the book: Russ Ackoff: ‘the book is the best overview of the field I have seen’ JP van Gigh: ‘Jackson does a masterful job. The book is lucid ...well written and eminently readable’ Professional Manager (Journal of the Chartered Management Institute): ‘Provides an excellent guide and introduction to systems thinking for students of management’

A complex and vulnerable contemporary society continually poses new challenges in terms of social conflict, and as crime advances, so must strategies for prevention and rehabilitation. Many facets of crime prevention and rehabilitation of offenders are public activities closely linked to other aspects of the political and social life of a region. The Handbook of Research on Trends and Issues in Crime Prevention, Rehabilitation, and Victim Support is a scholarly publication that examines existing knowledge on crime dynamics and the implementation of crime victims’ rights. Highlighting a wide array of topics such as cyberbullying, predatory crimes, and psychological violence, this book is ideal for criminologists, forensic psychologists, psychiatrists, victim advocates, law enforcement, criminal profilers, crime analysts, therapists, rehabilitation specialists, psychologists, correctional facilities, wardens, government officials, policymakers, academicians, researchers, and students. Work plays an essential role in how we engage with the world, reflecting our desire to be productive, creative, and connected to others. By exploring the inner experiences of people at work, people seeking work, and people transitioning in and out of work, this book provides a rich and complex picture of the contemporary work experience. Drawing from extensive interviews with working people across the US, as well as insights from psychological research on work and careers, the book provides compelling evidence that the nature of work in the US is eroding-- and with powerful psychological and social consequences. From this conclusion, the book also illustrates the rationale and roadmap for a renewed agenda toward full employment and toward fair and dignified jobs for all who want to work. The emotional insights complement the conclusions of the best science and policy analyses on working, culminating in a powerful call for policies that attend to the real lives of individuals in 21st century America. By weaving these various sources together, Blustein delineates a conception of working that conveys its complexity, richness, and capacity for both joy and despair.

Physicochemical and Environmental Plant Physiology, Fifth Edition, is the updated version of an established and successful text and reference for plant scientists. This work represents the seventh book in a 50-

year series by Park Nobel beginning in 1970. The original structure and philosophy of the book continue in this new edition, providing a genuine synthesis of modern physicochemical and physiological thinking, while updating the content. Key concepts in plant physiology are developed with the use of chemistry, physics, and mathematics fundamentals. The book contains plant physiology basics while also including many equations and often their derivation to quantify the processes and explain why certain effects and pathways occur, helping readers to broaden their knowledge base. New topics included in this edition are advances in plant hydraulics, other plant–water relations, and the effects of climate change on plants. This series continues to be the gold standard in environmental plant physiology. Describes the chemical and the physical principles behind plant physiological processes Provides key equations for each chapter and solutions for the problems on each topic Includes features that enhances the utility of the book for self-study such as problems after each chapter and the 45-page section "Solution to Problems" at the end of the book Includes appendices with conversation factors, constants/coefficients, abbreviations, and symbols New to this edition: The scientific fields and the nationalities of the more than 115 scientists mentioned in the book, providing a nice personal touch While adding over 100 new or updated references, reference of special importance historically are retained, showing how science has advanced over the ages The often challenging problems at the end of each chapter provide an important test of the mastery of the topics covered. Moreover, the solutions to the problems are presented in detail at the end of the book. The book can thus be used in courses but also especially useful for students or other persons studying this often difficult material on their own Finally and most important, the fifth edition continues the emphasis of a quantitative approach begun fifty years ago by Park Nobel (1970) with the publication of his first book in the series. Over the next fifty years from 1970 to 2020, the author has gained considerable experience on how to present quantitative and often abstract material to students. This edition is most likely the final version in the series, which not only covers some of his unique contributions but also has helped countless students and colleagues appreciate the power and insight gained into biology from calculations! From the moment Captain America punched Hitler in the jaw, comic books have always been political, and whether it is Marvel's chairman Ike Perlmutter making a campaign contribution to Donald Trump in 2016 or Marvel's character Howard the Duck running for president during America's bicentennial in 1976, the politics of comics have overlapped with the politics of campaigns and governance. Pop culture opens avenues for people to declare their participation in a collective project and helps them to shape their understandings of civic responsibility, leadership, communal history, and present concerns. *Politics in the Gutters: American Politicians and Elections in Comic Book Media* opens with an examination of campaign comic books used by the likes of Herbert Hoover and Harry S. Truman, follows the rise of political counterculture comix of the 1960s, and continues on to the graphic novel version of the 9/11 Report and the cottage industry of Sarah Palin comics. It ends with a consideration of comparisons to Donald Trump as a supervillain and a look at comics connections to the pandemic and protests that marked the 2020 election year. More than just escapist entertainment, comics offer a popular yet complicated vision of the American political tableau. *Politics in the Gutters* considers the political myths, moments, and mimeses, in comic books—from nonfiction to science fiction, superhero to supernatural, serious to satirical, golden age to present day—to consider how they represent, re-present, underpin, and/or undermine ideas and ideals about American electoral politics. The incredible crimes of Britain's most notorious schoolboy serial killer, Graham Young, as told by the bestselling and much-respected true crime author of *The Murders at White House Farm*. There are few criminal cases more astonishing yet less well known than that of Graham Young. A quintessentially British crime story set in the post-war London suburbs, it involves two sensational

trials, murders both certain and probable, a clutch of forgiving relatives, and scores of surviving victims. Fourteen in the summer of 1962, Graham stood in the Old Bailey dock charged with poisoning a schoolfriend and family members by adding antimony to their packed lunches, Sunday roast and morning cups of tea. Diagnosed with multiple personality disorders, Graham's trial resulted in his detainment at Broadmoor, where he was the youngest patient. But it was on his release from Broadmoor that Graham caused the greatest harm. Finding employment in Hadlands, a photographic supplies firm, his role as junior storeman meant he was expected to make tea and coffee for his colleagues. And very soon, numerous members of staff began experiencing crippling stomach pains... A psychologically astute insight into the mind of a complex and intriguing individual, *A Passion for Poison* is true crime at its best. Praise for Carol Ann Lee *Somebody's Mother, Somebody's Daughter: Victims and Survivors of the Yorkshire Ripper* 'My book of the year... the first time the stories of the women who came into the sights of notorious serial killer Peter Sutcliffe have been told, and it gives voice to their families... deeply poignant' - Lynda La Plante *One of Your Own: The Life & Death of Myra Hindley* 'Scrupulously unsensational and as good a biography of Hindley as we'll get' - Sunday Times

Tourism in the Mediterranean Sea: An Italian Perspective is the product of a collaborative group of experts in the field of tourism. Academics, whose research focuses on regional tourism system governance, alongside several experts from the tourism sector, contributed to the volume with distinct issues related to the tourism industry. As one of the first scholarly books to focus on colorism in education, this volume considers how connections between race and color may influence school-based experiences. Chapter authors question how variations in skin tone, as well as related features such as hair texture and eye color, complicate perspectives on race and they demonstrate how colorism is a form of discrimination that affects educational stakeholders, especially students, families, and professionals, across P-16 institutions. This volume provides an outline of colorism's contemporary relevance within the United States and shares considerations for international dimensions that are linked to immigration, refugee populations, and Canada. By situating colorism in an educational context, this book offers suggestions for how educators may engage and confront this form of discrimination. The purpose of this book is to combine perspectives of scholars from Africa on Child Theologies from a variety of theological sub-disciplines to provide some theological and ministerial perspectives on this topic. The book disseminates original research and new developments in this study field, especially as relevant to the African context. In the process it addresses also the global need to hear voices from Africa in this academic field. It wants to convey the importance of considering Africa's children in theologising. The different chapters represent diverse methodologies but the central and common focus is to approach the subject from the viewpoint of Africa's children. The individual authors' varied theological sub-disciplinary dispositions contribute to the unique and distinct character of the book. Almost all chapters are theoretical orientated with less empirical research, although some of the chapters refer to empirical research which the authors have done in the past. Most of the academic literature in the field of Theologies of Childhood is from American or British- European origin. The African context is fairly absent in this discourse, although it is the youngest continent and presents unique and relevant challenges. This book was written by theological scholars from Africa, focussing on Africa's children. It addresses not only theoretical challenges in this field but also provides theological perspectives for ministry with children and for important social change. Written from a variety of theological sub-disciplines, the book is aimed at scholars across theological sub- disciplines, especially those theological scholars interested in the intersections between theology, childhood studies and African cultural or social themes. It addresses themes and provide insights that is also relevant for specialist leaders and professionals in this field. No part of the book was plagiarised from

another publication or published elsewhere before. This book focuses on understanding the international behaviours of SMEs, entrepreneurial ventures, and entrepreneurs. The collection of contributions gathered in the book highlights the importance of cultures, contexts and behaviours that pertain to the international entrepreneurship arena. The respective chapters address topics such as entrepreneurial cognition, international entrepreneurial ecosystems, innovation, international market entry decisions, family SMEs, international human resources management, cross-cultural and indigenous entrepreneurship, social capital and sustainability in international markets. All contributions are based on the latest empirical and theoretical research, and provide key findings and concrete recommendations for scholars, entrepreneurs, organizations and policy makers. Trapped in a Maze provides a window into families' lived experiences in poverty by looking at their complex interactions with institutions such as welfare, hospitals, courts, housing, and schools. Families are more intertwined with institutions than ever as they struggle to maintain their eligibility for services and face the possibility that involvement with one institution could trigger other types of institutional oversight. Many poor families find themselves trapped in a multi-institutional maze, stuck in between several systems with no clear path to resolution. Tracing the complex and often unpredictable journeys of families in this maze, this book reveals how the formal rationality by which these institutions ostensibly operate undercuts what they can actually achieve. And worse, it demonstrates how involvement with multiple institutions can perpetuate the conditions of poverty that these families are fighting to escape. Introduction to Qualitative Research Methods in Psychology by Dennis Howitt provides a comprehensive, practical and up to date coverage of the area. For the fourth edition, the text has been extensively revised for easier reading and comprehension. With a clear and straightforward style, the book introduces qualitative research from data collection to analysis. Examples of real research and practical guidance for each methodological approach are included throughout to equip the reader with an understanding of the process and the skills to be able to carry out their own research. There are also dedicated sections on ethics, quality and report writing. All of this is achieved while providing a thorough theoretical and historical context for the qualitative methods. With an increased focus on helping students to develop the practical skills for carrying out qualitative research, this 4th edition includes examples of how the theory can be put into practice throughout. Examples of qualitative reports, with annotated commentary give students a clear idea how to write up a report. The text covers a range of methods evaluating each in a constructive, non-partisan way.
