Cradle to Cradle Oct 31 2022 A manifesto for a radically different philosophy and practice of manufacture and environmentalism "Reduce, reuse, recycle" urge environmentalists; in other words, do more with less in order to minimize damage. But as this provocative, visionary book argues, this approach perpetuates a one-way, "cradle to grave" manufacturing model that dates to the Industrial Revolution and casts off as much as 90 percent of the materials it uses as waste, much of it toxic. Why not challenge the notion that human industry must inevitably damage the natural world? In fact, why not take nature itself as our model? A tree produces thousands

of blossoms in order to create another tree, yet we do not consider its abundance wasteful but safe, beautiful, and highly effective; hence, "waste equals food" is the first principle the book sets forth. Products might be designed so that, after their useful life, they provide nourishment for something new--either as "biological nutrients" that safely re-enter the environment or as "technical nutrients" that circulate within closed-loop industrial cycles, without being "downcycled" into low-grade uses (as most "recyclables" now are). Elaborating their principles from experience (re)designing everything from carpeting to corporate campuses, William McDonough and Michael Braungart make an exciting and viable case for change.

The Lantern's Ember Jan 02 2023 A bold and ghostly stand-alone from New York Times bestselling author Colleen Houck, with all the moodiness of Sleepy Hollow and all the romance her fans love. Welcome to a world where nightmarish creatures reign supreme. Five hundred years ago, Jack made a deal with the devil. It's difficult for him to remember much about his mortal days. So he focuses on fulfilling his sentence as a Lantern--one of the watchmen who guard the portals to the Otherworld, a realm crawling with every nightmarish creature imaginable. Jack has spent centuries jumping from town to town, ensuring that nary a mortal--or not-so-mortal--soul slips past him. That is, until he meets beautiful Ember O'Dare. Seventeen, stubborn, and a natural-born witch, Ember feels a strong pull to the Otherworld. Undeterred by Jack's warnings, she crosses into the forbidden plane with the help of a mysterious and debonair vampire--and the chase through a dazzling, dangerous world is on. Jack must do everything in his power to get Ember back where she belongs before both the earthly and unearthly worlds descend into chaos. Colleen Houck, the New York Times bestselling author of the Tigers Curse series and Reawakened series, breathes new life into classic folklore in this wild, twisting adventure propelled by the spirit of Halloween. "[Houck] offers a fresh spin on The Legend of Sleepy Hollow...with some genuine surprises in store."--Kirkus "A wild and seductive adventure...a must-have for YA collections."--SLJ

Personalization of Interactive Multimedia Services Sep 05 2020 The advance to the so-called Information Society is leading to an enormous growth in the amount of multimedia information available. The success or failure of the information technologies depends ultimately on the services provided to the final user, and an unmanageable amount of information can render them useless. To tackle this problem,

personalisation techniques are being developed to help consumers find the specific contents that match their preferences, interests, likings, and needs. Taking into account the strategic role of personalisation in the future of the information technologies, this book provides a technical overview of the current research and development trends, considering the wide range of application areas (education, government, commerce, news, entertainment,...) and the multiple devices (personal computers, digital TV set-top boxes, mobile phones, PDAs, watches, GPS navigators, etc., they embrace. The book comprises chapters authored by outstanding authors from academic institutions, describing their particular works in an extensive and self-contained manner, though with a global approach that will allow the readers to easily understand the core commonalities between the different algorithms, techniques, applications, and technologic platforms.

Men of Order May 14 2021 The authors trace the emergence of Ataturk and Reza Shah through the constitutional revolutions in Iran and the Ottoman Empire, which led to the introduction of European social models, the establishment of dictatorship and of secularist reforms. This produced in both Turkey and Iran highly authoritarian, nationalist, and quasi-westernised states, where the personality cult of the leader defined the politics of each country."

Modern Art - who Cares? Apr 24 2022 The conservation of contemporary art should not be a static process carried out behind closed doors but dynamic and open to discourse. New media and new materials constantly present issues which traditional conservation methods cannot address and a continual search for new techniques is therefore required. This dynamic research may include interviews with artists; documentation of artists' materials; the recording of image, word or sound of performances, installations, temporary and 'permanent' visual art; scientific research into the identification, composition, ageing and preservation of modern materials. This volume makes a most important contribution to the ongoing debate by presenting the conservation challenges relating to ten objects of different media and materials (plastics, kinetic objects, monochromes and works of mixed media) of considerable art-historical value. The ten selected studies include the works of Jean Tinguely, Piero Manzoni, Tony Cragg and Mario Merz. In addition to case studies, this volume includes symposium papers by art historians, physicists, philosophers, artists, conservators and critics on topics as varied as: accidental damage; working with artists; packing and transport; installation; identifying plastics; ethics, training, databases etc.

Birdography Nov 07 2020 Birdography is a series of humorous cartoons aimed at a specialized audience: birders and bird-watchers. Although one might be tempted to place it in the general humor category, it will likely be most appreciated by those with both knowledge of and great interest in birds, a readership that might be best characterized as "bird-lovers."

Radar Instruction Manual Sep 29 2022 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The

first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

Alchemy and Artificial Intelligence Jun 14 2021 Early successes in programming digital computers to exhibit simple forms of intelligent behavior, coupled with the belief that intelligent activities differ only in their degree of complexity, have led to the conviction that the information processing underlying any cognitive performance can be formulated in a program and thus simulated on a digital computer. Attempts to simulate cognitive processes on computers have, however, run into greater difficulties than anticipated. An examination of these difficulties reveals that the attempt to analyze intelligent behavior in digital computer language systematically excludes three fundamental human forms of information processing (fringe consciousness, essence/accident discrimination, and ambiguity tolerance). Moreover, there are four distinct types of intelligent activity, only two of which do not presuppose these human forms of information processing and can therefore be programmed. Significant developments in artificial intelligence in the remaining two areas must await computers of an entirely different sort, of which the only existing prototype is the little-understood human brain. Achtung-Panzer! Jul 28 2022 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Natural Capitalism Nov 19 2021 The first Industrial Revolution inaugurated 200 years of unparalleled material development for humankind. But the costs and the consequences are now everywhere evermore apparent: the living systems on which we depend are in retreat. Forests, topsoil, grasslands, wetlands, oceans, coral reefs, the atmosphere, aquifers, tundra and biodiversity are limiting factors - the natural capital on which all economic activity depends. And they are all in decline. Add to that a doubling of the world's population and a halving of available per capita resources in the first 50 years of the 21st century and the inevitability of change is clear. This work offers forms of industry and commerce that can not only enhance enormously the wellbeing of the world's growing population, but will reverse the destruction and pollution of nature and restore the natural processes so vital to the future. The book introduces four central and interrelated strategies necessary to perpetuate abundance, avert scarcity and deliver a solid basis for social development. The first of these is: Radical Resource Productivity - getting two, four, or even ten times as much from the same quantities of materials and energy. A revolution in efficiency that provides the most immediate opportunities for businesses to grow and prosper. The second strategy is: Ecological Redesign - eliminating the very idea of waste by designing industrial systems on the model of ecological ones. Instead, for example, of digging minerals out of the ground only to return them to landfill at the end of the product cycle, industrial processes will be designed to reuse materials constantly, in closed circles. The third strategy involves creating: A Service and Flow Economy - shifting from an economy of goods and purchases to one of service and flow, and redefining the relationship between producer and consumer. Affluence will no longer be measured by acquisition and quantity, but by the continuous receipt of quality, utility and performance. The final strategy is: Investing in Natural capital - reversing the worldwide ecosystem destruction to restore and expand the stocks of natural capital. If industrial systems are to supply an increasing flow of services in the future, the vital flow of services from living systems will have to be maintained or increased as well.

Cataloging Sheet Music May 26 2022 Discussions are designed to expand the music cataloger's understanding of publishing practices peculiar to sheet music. While much of the content emphasizes the description of the music, there are also sections devoted to subject access to illustrations, first-line/chorus/refrain text, illustrators, engravers, and publishers, and extensive reproductions of title pages from the 18th through mid-20th centuries, accompanied by examples of the cataloging, are also included.

Defining The Curriculum Dec 21 2021 This book explores some of the major processes involved in the definition of school subject knowledge. Using historical ethnographic methods, the contributors to the collection highlight and examine some of the factors involved at national, institutional and classroom levels in the making of school subjects. The first section of the book outlines the theoretical and methodological basis for the study of school subjects, and the reasons for and the possibilities of such a study are considered. In the second section some histories of school curricula are presented from a variety of settings - colonial

schools in Africa, working-class schools of the nineteenth century, nursery schools – and the conflicting forces of determination and change in school subjects are identified and examined. The third section focuses on the contemporary school situation and the papers isolate and investigate some of the interest groups and social processes which enter into or affect the realization of school knowledge in the classroom.
